

IntelliPlex

Business Intelligence Built for Manufacturing

Introducing IntelliPlex, the powerful business intelligence tool that's built into the Plex Manufacturing Cloud.

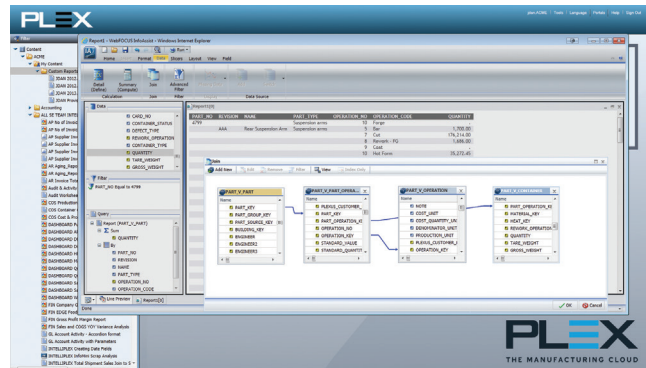

The Plex Manufacturing Cloud - IntelliPlex... the Potential of Big Data and the Power of Cloud ERP

ERP systems have lots of data. So much data that it's too complex to understand or even use unless you have a powerful business intelligence tool to analyze it.

Large companies with legacy ERP systems and smaller companies with point solutions have lots of data stored and sorted separately. It's really difficult to break out of data silos and even tougher to bring the information together. Manufacturing leaders now realize that data analytics are key decision-making tools. They see big data as an asset, filtering it and making sense of it to identify opportunities and achieve every competitive advantage possible.

Analytics are the new yardstick for our digital age. The Plex Manufacturing Cloud's operational information is continuously updated across all parts of the enterprise, giving users of Plex and IntelliPlex a distinct advantage. With IntelliPlex, users can transform the rich data resident within their Cloud ERP system into powerful reports and dashboards that help visualize complex information, making it crystal clear.

The infoAssist function lets builders use SQL Query Writer views to access Plex data.

Insight from Anywhere IntelliPlex is resident in the Cloud, just like Plex, so you can access it from anywhere with an Internet connection.

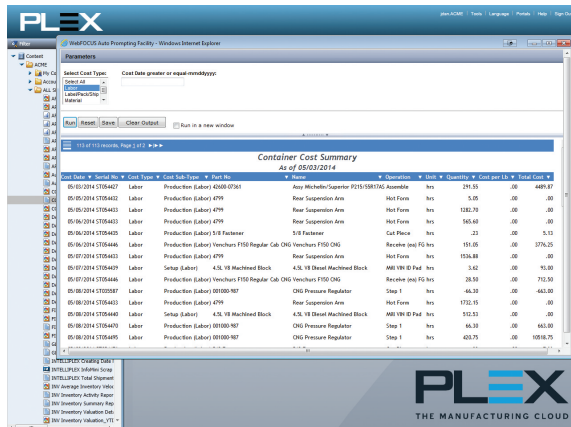

Plex captures data at the point of origin in your business, whether it's the plant floor, the accounting office, or a manager's desk. You get an accurate snapshot of what's going on inside your business. IntelliPlex filters, shapes and reports this information exactly the way you want to see it in near real time. At last, the power of knowledge is available to decision makers, in businesses both large and small. And it's available from anywhere, anytime.

IntelliPlex Inside Your Business

Every business is different and IntelliPlex is flexible, so it's a perfect fit. Here's an example of how it works:

The Supply Chain Manager and her team set up the dashboard to see the information they're interested in. The manager assigns the task of building the dashboard to the bright college intern. He's an IntelliPlex report builder who:

- Builds reports by areas of interest.
- Customizes the reports in a dashboard.
- Provides templates so the Supply Chain Manager can slice and dice the data.

No Programming Skills Needed

- Access the reports online.
- Receive previously scheduled reports automatically via email to his iPad.
- Work offline to edit or change the appearance of reports.

IntelliPlex makes insightful information available to decision makers.

- Senior and middle managers
- Employees
- Customers
- Suppliers

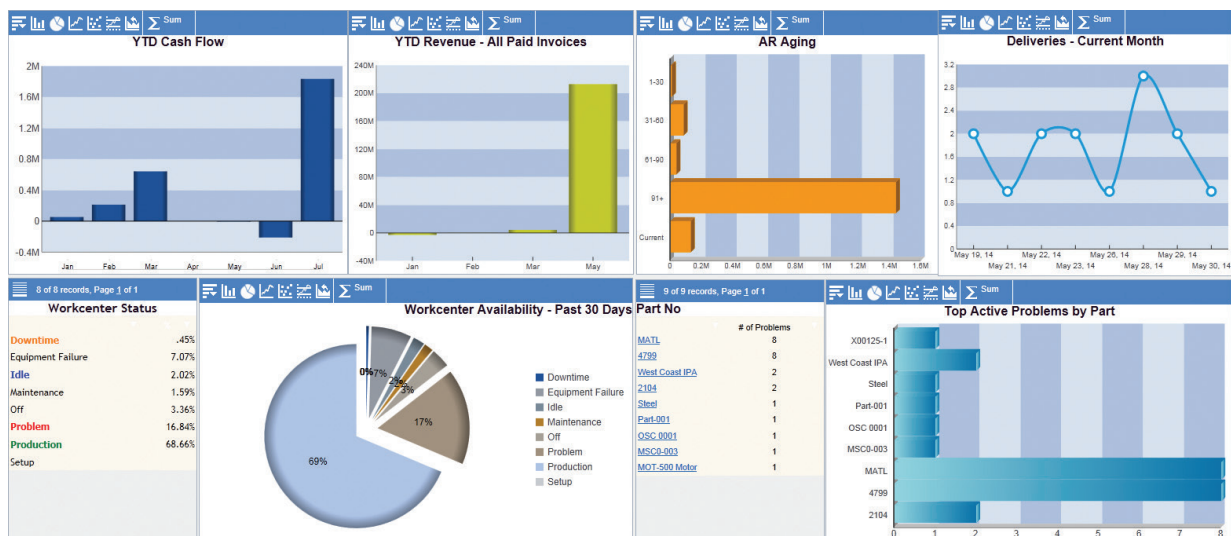

IntelliPlex users can create powerful charting and graphical views, using multiple filters.

The IntelliPlex Difference

Some big data tools are as complicated as the complex data they claim to capture. IntelliPlex simplifies big data by getting the important things right.

- **Unlimited Viewers:** There's no charge for viewers. Share the knowledge. Have as many viewers as you want.
 - **Accessible:** IntelliPlex is accessed like any other Plex function. Just click on the menu icon and you're there.
 - **Timely:** IntelliPlex offers a report scheduling and distribution feature that makes it possible to send recurring reports to the right users as soon as the reports are ready.
- **Single Sign-On Security:** IntelliPlex security credentials are synchronized with Plex. Users do not need a second sign on. You click on the link and IntelliPlex works with Plex to validate your credentials and present the data you are authorized to see.
 - **Integration:** IntelliPlex is built-in, not bolted-on, so it performs flawlessly.
 - **Implementation:** IntelliPlex is already resident in the Plex Manufacturing Cloud so there are no third-party installation issues.
 - **Scalability:** IntelliPlex can cut large data sets down to size because of Plex Systems' industrial-strength Cloud data center.

Additional capabilities include advanced report development with highly sophisticated charting and graphics.

Now that's Smart Get started now. Talk with your Plex customer service professional. Remember, IntelliPlex users are part of a community. You'll find information in the Plex Community and assistance in the IntelliPlex user discussion forums. And because we leverage a leading business intelligence product with larger market share, there are plenty of third-party resources and expertise to augment the IntelliPlex community, so your use of IntelliPlex is always, well, intelligent.

You're in the results business. So are we. And good results begin with sound decisions based on solid information. Introducing IntelliPlex, the powerful business intelligence tool that's built-in to the Plex Manufacturing Cloud. Now you can analyze the rich data resident in your ERP system and make smarter decisions.

IntelliPlex cuts big data down to size, making it useful and actionable in ways that standard user screens and tabular reports cannot. Experience the difference.

- Establish benchmark standards and measure performance against key indicators.
- Use reports and dashboards to visualize complex information. No programming skills needed.
- Discover hidden trends and inefficiencies as revealed by near-real-time reporting.
