

THE PLEX MANUFACTURING CLOUD

IntelliPlex Procurement and Spend Analytics

ERP systems for manufacturing collect incredible volumes of data across the enterprise. You want to leverage this wealth of data, but solely relying on IT resources to build and maintain reports or dashboards results in delays and constant iterations. You need a pre-configured interactive dashboard, built on a cloud analytic platform, that takes away the complexity of reporting and helps with responsive decision making—from any device, anywhere.

Data-driven Actions

Staying on top of purchasing and supplier performance data is critical for the procurement of high quality raw material at the right time and price. Purchasing managers find themselves flying blind if they can't access the right data, the analytics are too cumbersome to use, or they can't trust their data. IntelliPlex™ Procurement and Spend Analytics provides true role-based dashboards to allow operations users to take data-driven actions, rather than slog through offline spreadsheets.

Visual Insights

Purchasing managers require quick and reliable access to critical insights to make informed strategic decisions. But waiting for data analysts to provide reports can make analysis difficult and time-consuming. IntelliPlex Procurement and Spend Analytics is a collection of rich visual best practice interactive widgets for purchasing, spend, supplier performance, supplier profile, and material quality metrics and KPIs (key performance indicators), providing a jump-start to your decision making.

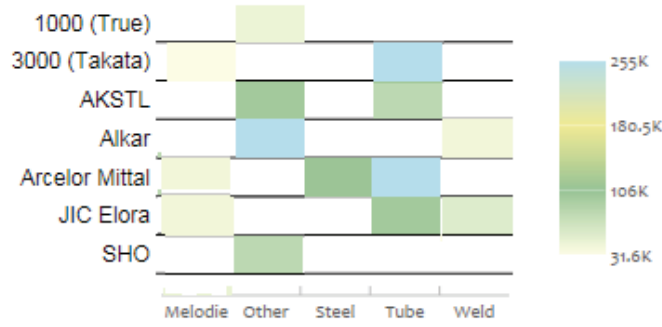

Personalized Portals

Different teams in the manufacturing plant require not only very different metrics, but even different ways of presenting and viewing data. Further, each individual user may prefer a unique layout, metric, data presentation, or even color scheme. IntelliPlex Procurement and Spend Analytics lets you personalize your view to purchases and supplier performance, without writing a single line of code.

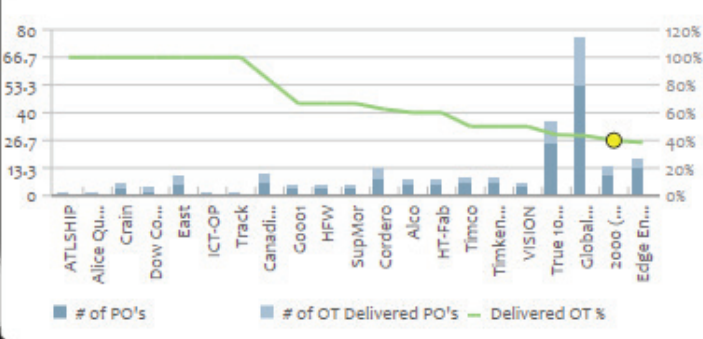

IntelliPlex Procurement and Spend Analytics is a collection of purpose-built purchasing, spend, supplier performance, supplier profile, material quality metrics, and KPIs designed for purchasing managers for more informed decisions.

THE PLEX MANUFACTURING CLOUD

IntelliPlex Procurement and Spend Analytics

Purchasing and Spend Domain Focus

- Gain insight with immediate access to out-of-the-box best practices procurement and spend KPIs and metrics.
- Monitor purchasing activities through a collection of KPIs including spend, supplier scorecard, Purchase Order cycle time, Purchase Order size, purchasing trends, top 10 parts and suppliers, and more.
- View consolidated purchasing and spend performance data for the enterprise or look at the performance of individual manufacturing facilities one by one.

Rich Data Visualization

- Get timely secure access to purchasing and spend data from anywhere and any device.
- Uncover trends, anomalies, and focus areas through rich visual dashboards in a way that spreadsheets or reports could never achieve.

- Interact with dashboard elements for deeper insight and underlying trends—drill-down or view procurement and spend information across geography, time, and other dimensions.

Personalized Experience

- Get a customized view through role-based dashboards for data-driven actions quickly and easily.
- Create a personalized purchasing and spend dashboard to showcase the exact metric, chart, or graph to align with a manufacturing process and/or a role.
- Take advantage of the self-service ad-hoc query utility to quickly get data and answers—without writing a single line of code and without having to know the underlying Plex data structure.

The domain-specific self-service functionality of the IntelliPlex Analytic platform delivers the right information in the right format for more-informed decision making.
